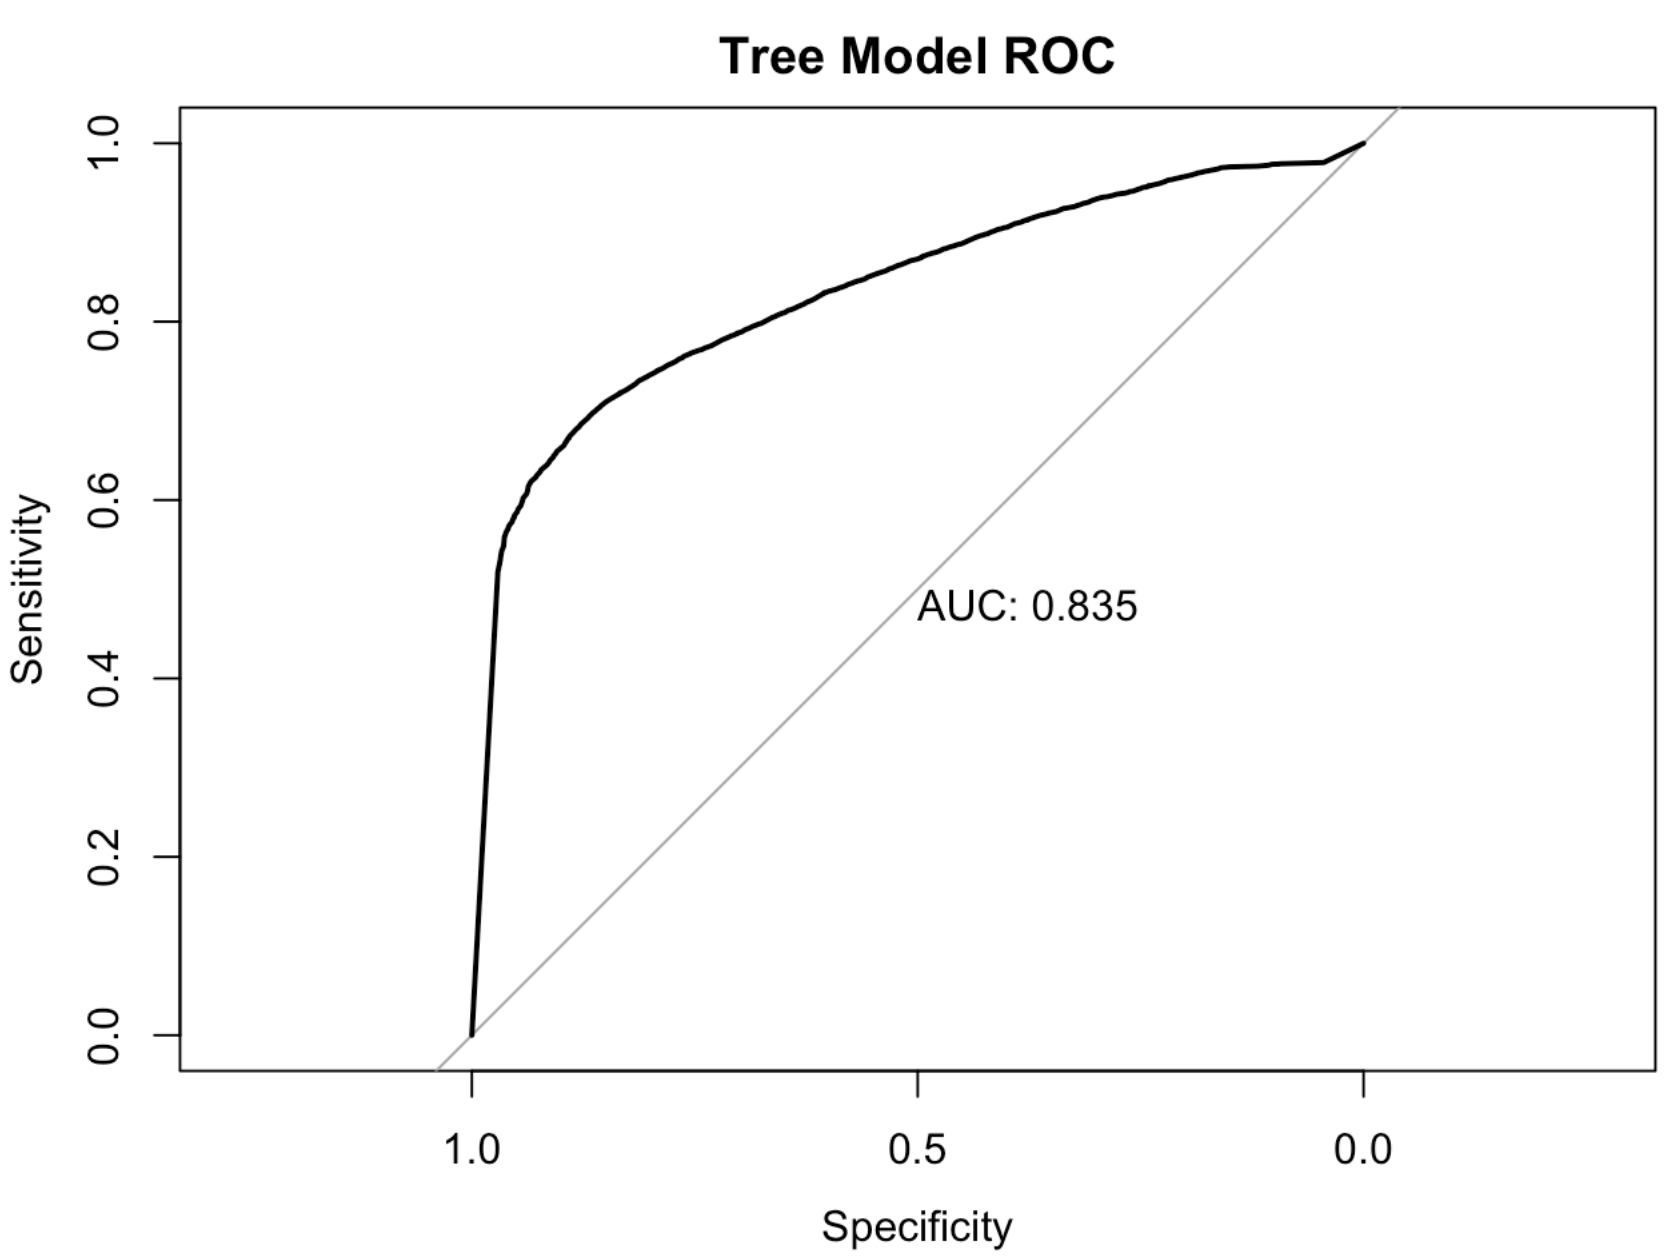
Logistic Regression model

```
# Logistic Regression model for flights data takes more than 10 hours
# to train, the trained model is saved but is 3.9 Gb in size (.rds)
# Also the ROC calculated is only 0.592, hence not using this model
#source('src/03-MODELS/CSX415_Project_Data_Model_LogisticRegression.R')
#glm.model
#summary(glm.model)
#plot.roc(TestData$DelayedOrCancelled,glm_predictions,print.auc=TRUE,main="GLM Model ROC")
```

Tree

```
source('src/03-MODELS/CSX415_Project_Data_Model_Tree.R')
#tree.model
#summary(tree.model)
#plot(tree.model)
plot.roc(TestData$DelayedOrCancelled,tr_predictions[,2],print.auc=TRUE,main="Tree Model ROC")
```



Model Evaluation

Naive Bayes Model Evaluation

```
confusionMatrix(TestData$DelayedOrCancelled,nb_predictions)
```

```

Model Selection

Tree Model is more accurate and ROC is greater than 0.75 as required compared to Naive Bayes model.

.

Logistic Regression model takes long time to train and ROC is less than 0.65 hence not selecting Logistic Regression model also because saved model .rds is 3.9 Gb in size hence not suitable for deloyment

.

Comparing the metrics, the accuracy and Kappa values of Tree Model are greater than Naive Bayes Model

.

Conclusion: Tree Model satisfies the requirements criteria of

accuracy greater than 70% and ROC(AUC) greater than 0.65 and hence used for deployment
